## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Novak (U.S. Patent No. 6,753,481 B2).

In re claim 1, Novak (Figs. 3, 7) discloses a semiconductor package comprising:

A microstrip transmission line (14, 20);

A first conductive plane (16);

A first dielectric layer (22) provided between the microstrip transmission line and the first conductive plane;

A second conductive plane (18); and

A second dielectric layer (24) provided between the first conductive plane and the second conductive plane.

In re claim 4, Novak (Fig. 3) discloses a dual referenced transmission line for transmission of a signal in a package including semiconductor circuits, wherein the dual referenced transmission line is a micorstrip structure having a first reference plane (16) suspended over a second reference plane (18).

Art Unit: 2815

3. Claims 2, 3 and 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Novak as applied to claims 1 and 4 above, and further in view of Tserng et al. (U.S. Patent No. 5,717,231).

In re claims 2, 3, 5 and 6, Novak discloses the devices of claims 1 and 4 but does not expressly disclose how to measure the characteristic impedance of the microstrips. Tserng discloses the parameters for determining the characteristic impedance for microstrip lines (column 4, lines 15-17). It would have been obvious for one skilled in the art at the time of the invention to determine the characteristic impedance of the microstrip lines of Novak as disclosed by Tserng for the purpose, for example, of evaluating data in order to reduce power plane resonances.

In re claim 7, Novak discloses the device of claim 6, wherein the predetermined value is less than two ohms (as shown in Figs. 4-6).
